Education

Georgia State University

Bachelor of Science in Computer Science · GPA: 3.75/4.0 *Expected May 2027*

- **Coursework:** Distributed Systems, Operating Systems, Database Systems, Computer Networks, Data Structures

Work Experience

TiMoto AI **Sep 2025 – Present**

Software Engineer

- Owned end-to-end delivery of production AI applications as primary engineer on a 3-person team – architected and shipped **vLLM/PagedAttention** inference serving in direct response to production **OOM failures**, eliminating them entirely
- Restored **100% evaluation success rate** at **sub-50ms p99** by resolving a production **gRPC deadlock** – replaced inconsistent lock-acquisition ordering under concurrent calls with a single enforced sequencing rule across the inter-service layer
- Cut incident root-cause time from unknown to **under 15 minutes** by building TiMoto's observability stack from zero – deployed **Prometheus** and **Grafana** metrics alongside CloudWatch dashboards across the gRPC and ML serving layers
- Prevented single-zone failures from taking production down, sustaining **99.9% uptime** and cutting infrastructure cost **44% ($40–60/month)**, by architecting a multi-AZ ECS Fargate deployment with **Terraform IaC** and an auto-rollback circuit breaker pattern
- Cut mean-time-to-identify **68%** by building a post-mortem practice with runbooks and a shared on-call rotation

Google **May 2025 – Aug 2025**

Software Engineer Intern – Chrome Browser

- Shipped a **C++ IPC transport layer** and an event-driven **TypeScript**/React system to Chrome's stable channel in 12 weeks – serving **3B+ active users** at **sub-50ms p99** and **10K+ req/sec** – by choosing Protocol Buffers over custom serialization for schema evolution
- Turned a visibly sluggish settings search into an instant one for power users – **96% p99 latency cut** (1,200ms down to sub-50ms), zero production regressions – by replacing a mutex-contended search path with a **lock-free concurrent trie**
- Ended cross-team cascading UI bugs and accelerated feature delivery **68%** across **25K+ lines** of Chromium, at **95% test coverage**, by decoupling UI state propagation via the observer pattern
- Landed production-ready changes into Chrome's codebase – reviewed and adopted by senior engineers – by delivering design docs and code reviews at **95% test coverage** alongside the Chrome infrastructure team

Develop for Good **May 2024 – Aug 2024**

Software Engineer Intern

- Collaborated with nonprofit program managers to define requirements and scaled a backend to support **500+ concurrent users**, cutting deployment time 90% with a stateless AWS BaaS, JWT auth, and a GitHub Actions CI/CD auto-scaling policy
- Cut API response time from 3+ seconds to **sub-100ms** on 10,000+ record datasets by diagnosing an N+1 query bottleneck and redesigning the data layer with **PostgreSQL indexing**

Personal Projects

Pulumi – Contributor | *Go, TypeScript, Infrastructure-as-Code (IaC)*

- Submitted Go CLI features and bug fixes enabling **multi-cloud (AWS/Azure/GCP)** provisioning – under active review by core maintainers
- Analyzed **Raft/Paxos consensus** in distributed state synchronization layer – studied linearizability guarantees and correctness under concurrent operations and partial failures

Technical Skills

Full-Stack & AI Delivery: TypeScript, React, Python, Django, FastAPI, vLLM, PagedAttention, LangChain, REST APIs
Languages: TypeScript, Python, C++, Go, Java, JavaScript, SQL, Bash, Rust
Distributed Systems: gRPC, Circuit breakers, Exactly-once semantics, Multi-AZ, Event-driven architecture, Kafka
Cloud & Infrastructure: AWS (ECS Fargate, EKS, EC2, S3, RDS), Terraform, Kubernetes, Docker, CI/CD, CloudWatch, Prometheus, Grafana
Databases: PostgreSQL, Redis, MongoDB
AI Dev Tools: Claude Code, GitHub Copilot, Codex, Cursor
