EDUCATION

Georgia State University

Expected May 2027

Bachelor of Science in Computer Science • **GPA: 3.75/4.0**

- Coursework: Distributed Systems, Operating Systems, Database Systems, Computer Networks, Data Structures
- Honors: Presidential Scholarship, Anita Andrew Fellowship, Roxie Alexander Memorial Award

EXPERIENCE

Google | Software Engineer Intern – Chrome Browser

May 2025 – Aug 2025

- Architected event-driven **TypeScript/React** system with observer pattern for **UI state management** – decoupled state propagation across **25K+ lines** of Chromium; **68% feature delivery acceleration** at **95% test coverage**; shipped to **3B+ active users**
- Identified settings navigation as p99 bottleneck at 1,200ms; implemented optimized **lock-free concurrent search** eliminating contention – **96% latency reduction**, high-performance UI with zero production regressions
- Designed **C++ IPC transport layer** with **Protocol Buffers** for low-latency data flows – selected for schema evolution and cross-language compatibility; **sub-50ms p99**, **10K+ req/sec**, **3B+ users**
- Delivered design documents and participated in design reviews and code reviews; changes adopted into production branch reviewed by senior Chrome engineers

TiMoto AI | Software Engineer

Sep 2025 – Present

- Primary engineer on 3-person team – built **React** frontend surfaces integrated with **FastAPI REST APIs** and clean data flows; owned projects end-to-end in a fast-moving 0-to-1 environment
- Built **AI-native product** features – **LLM API integration** (Claude, GPT), **LLM-as-a-judge evaluation** pipeline, **LangChain** orchestration, **vLLM** inference serving
- Owned reliability and performance – **CloudWatch + Prometheus + Grafana** observability, **99.9% uptime SLO**; **PostgreSQL + Redis** data layer with performance-tuned queries; **gRPC** services with exactly-once delivery

Develop for Good | Software Engineer Intern

May 2024 – Aug 2024

- Built user-facing web application on AWS – JWT auth for horizontal scalability; auto-scaling supporting **500+ concurrent users**, **90% deployment time reduction** via CI/CD (GitHub Actions)
- Diagnosed N+1 query bottleneck degrading response to 3s+; redesigned with **PostgreSQL composite indexing** achieving **sub-100ms** data fetches for 10,000+ records

PROJECTS

Pulumi – Contributor | Go, TypeScript, Open Source

github.com/pulumi

- Submitted **Go CLI features** for multi-cloud provisioning – open-source developer tooling contribution under active review by core maintainers
- Analyzed **Raft/Paxos consensus** in distributed state synchronization – studied linearizability and correctness under concurrent operations

SKILLS

Frontend: React, TypeScript, JavaScript, HTML/CSS, Observer-pattern state management, REST API integration, Performance optimization, Responsive UI

Languages: TypeScript, JavaScript, Python, Go, C++, Java, SQL, Bash, Rust

Frameworks & APIs: Node.js, FastAPI, Django, REST APIs, Protocol Buffers, PostgreSQL, Redis, MongoDB

AI & LLM: LLM APIs (Claude, GPT), LangChain, LLM-as-a-judge evaluation, RAG, vLLM, PyTorch

Cloud & Tooling: AWS, GCP, Terraform, Docker, CI/CD, Git, CloudWatch, Prometheus, Grafana

AI Dev Tools: Claude Code, GitHub Copilot, Codex, Cursor
