## EDUCATION

### Georgia State University

Expected May 2027

Bachelor of Science in Computer Science • **GPA: 3.75/4.0**

- Coursework: Distributed Systems, Operating Systems, Database Systems, Compilers, Computer Networks, Data Structures
- Honors: Presidential Scholarship, Anita Andrew Fellowship, Roxie Alexander Memorial Award

## EXPERIENCE

### Google | Software Engineer Intern – Chrome Browser

May 2025 – Aug 2025

- Architected event-driven **TypeScript/React** system with observer pattern and **well-abstracted reusable components** – decoupled UI state across **25K+ lines** of Chromium; **68% feature delivery acceleration** at **95% test coverage**; shipped to **3B+ active users**
- Built UI on top of complex systems – designed **C++ IPC transport layer** with **Protocol Buffers** and the TypeScript surface above it; understood the full data path from process boundary to UI; **sub-50ms p99**, **3B+ users**
- Identified p99 bottleneck at 1,200ms; implemented **lock-free concurrent search** eliminating contention – **96% latency reduction**, zero production regressions
- Delivered design documents; drove technical breakdowns in design and code reviews with senior Chrome engineers

### TiMoto AI | Software Engineer

Sep 2025 – Present

- Primary engineer on 3-person team – built **React** frontend surfaces over a distributed ML **data platform**; **Python (FastAPI/Django)** backend; owned projects end-to-end with high autonomy at a high-growth startup
- Built **ML data infrastructure** – batch and real-time data pipelines, **vLLM** inference serving, **LLM-as-a-judge evaluation**, **LangChain**; **PostgreSQL + Redis** data layer with query optimization
- Designed **gRPC distributed services** – debugged production deadlock via happens-before analysis; **exactly-once delivery**, circuit breaker with auto-rollback; **99.9% uptime SLO**; multi-AZ ECS Fargate with Terraform

### Develop for Good | Software Engineer Intern

May 2024 – Aug 2024

- Built user-facing web application on AWS – JWT auth for horizontal scalability; auto-scaling supporting **500+ concurrent users**, **90% deployment time reduction** via CI/CD
- Diagnosed N+1 **query** bottleneck degrading response to 3s+; redesigned with **PostgreSQL composite indexing** (query optimization) achieving **sub-100ms** for 10,000+ records

## PROJECTS

### Pulumi – Contributor | Go, TypeScript, Developer Tooling

[github.com/pulumi](https://github.com/pulumi)

- Submitted **Go CLI features** for multi-cloud provisioning – **developer tooling across command-line surfaces**, under active review by core maintainers
- Analyzed **Raft/Paxos consensus** in distributed state synchronization – studied linearizability and correctness under concurrent operations and partial failures

## SKILLS

**Frontend:** React, TypeScript, JavaScript, HTML/CSS, Observer-pattern state management, Reusable components, REST API integration, Performance optimization

**Languages:** TypeScript, Python, Go, C++, Java, JavaScript, SQL, Bash, Rust

**Data Infrastructure & ML:** Data pipelines (batch + real-time), PostgreSQL, Redis, Query optimization, vLLM, LLM APIs (Claude, GPT), LangChain, LLM-as-a-judge evaluation

**Distributed Systems:** gRPC, Protocol Buffers, Exactly-once semantics, Circuit breakers, Multi-AZ, Event-driven architecture

**Cloud & Tooling:** AWS (ECS Fargate, EKS, S3, RDS), GCP, Terraform, Docker, CI/CD, CLI tooling, CloudWatch, Prometheus, Grafana

**AI Dev Tools:** Claude Code, GitHub Copilot, Codex, Cursor
