EDUCATION

Georgia State University

Expected May 2027

Bachelor of Science in Computer Science • **GPA: 3.75/4.0**

- Coursework: Distributed Systems, Operating Systems, Database Systems, Computer Networks, Data Structures
- Honors: Presidential Scholarship, Anita Andrew Fellowship, Roxie Alexander Memorial Award

EXPERIENCE

Google | Software Engineer Intern – Chrome Browser

May 2025 – Aug 2025

- Architected event-driven **TypeScript/React** system with observer pattern and **reusable component architecture** – decoupled UI state across **25K+ lines** of Chromium; **68% feature delivery acceleration** at **95% test coverage**; shipped to **3B+ active users**
- Identified rendering-path p99 bottleneck at 1,200ms; designed **lock-free concurrent search** eliminating mutex contention – **96% latency reduction**, zero production regressions; performance-obsessed UI engineering
- Built UI spanning the **full stack** – designed **C++ IPC transport layer** with **Protocol Buffers** and the TypeScript surface above it; understood the full data path from process boundary to UI; **sub-50ms p99, 3B+ users**
- Delivered design documents and drove code reviews with senior Chrome engineers at **95% test coverage**

TiMoto AI | Software Engineer

Sep 2025 – Present

- Primary engineer on 3-person team – built **React** frontend and **Python (FastAPI/Django)** backend end-to-end; owned product decisions from scoping to shipping in a 0→1 environment
- Built **AI product** – **LangChain** orchestration, **LLM API integration** (Claude, GPT), **LLM-as-a-judge** evaluation pipeline, **vLLM** inference serving; designed failure states and graceful degradation for non-deterministic AI outputs
- Designed **gRPC distributed services** with exactly-once delivery; **PostgreSQL + Redis** data layer; multi-AZ **AWS ECS Fargate** with Terraform; **99.9% uptime SLO**; CloudWatch + Prometheus + Grafana observability

Develop for Good | Software Engineer Intern

May 2024 – Aug 2024

- Built user-facing web application on **AWS** – JWT auth for horizontal scalability; auto-scaling supporting **500+ concurrent users**, **90% deployment time reduction** via CI/CD (GitHub Actions)
- Diagnosed N+1 query bottleneck; redesigned with **PostgreSQL composite indexing** achieving **sub-100ms** for 10,000+ records

PROJECTS

Pulumi – Contributor | Go, TypeScript, Developer Tooling

github.com/pulumi

- Submitted **Go CLI features** for multi-cloud provisioning – **developer tooling** shipped to developers in their daily workflows; under active review by core maintainers
- Analyzed **Raft/Paxos consensus** in distributed state synchronization – studied linearizability and correctness under concurrent operations

SKILLS

Frontend: React, TypeScript, JavaScript, Observer-pattern state management, Reusable component architecture, Rendering performance, HTML/CSS, REST API integration

Languages: TypeScript, Python, Go, C++, Java, JavaScript, SQL, Bash, Rust

Frameworks & Systems: FastAPI, Django, Node.js, gRPC, Protocol Buffers, PostgreSQL, Redis

AI & Product: LangChain, LLM APIs (Claude, GPT), vLLM, LLM-as-a-judge evaluation, Agentic orchestration

Cloud & Infra: AWS (ECS Fargate, EKS, S3, RDS), Terraform, Docker, CI/CD, CloudWatch, Prometheus, Grafana, GCP

AI Dev Tools: Claude Code, GitHub Copilot, Codex, Cursor
