EDUCATION

Georgia State University

Expected May 2027

Bachelor of Science in Computer Science • **GPA: 3.75/4.0**

- Coursework: Distributed Systems, Operating Systems, Database Systems, Computer Networks, Data Structures
- Honors: Presidential Scholarship, Anita Andrew Fellowship, Roxie Alexander Memorial Award

EXPERIENCE

TiMoto AI | Software Engineer

Sep 2025 – Present

- Primary engineer on 3-person team – designed **gRPC inter-service architecture** with exactly-once delivery and circuit breaker auto-rollback; owned **PostgreSQL + Redis data model**; multi-AZ **AWS ECS Fargate** with Terraform IaC; **99.9% uptime SLO**
- Shipped complex features end-to-end with high ownership – **React** frontend, **Python (FastAPI/Django)** REST APIs, ML serving pipeline; made data model and architecture decisions without hand-holding
- Built **LLM-as-a-judge evaluation pipeline** (agentic testing) + daily **Claude Code + Cursor** workflow; **44% infrastructure cost reduction** (\$40–60/mo) through architecture tradeoffs

Google | Software Engineer Intern – Chrome Browser

May 2025 – Aug 2025

- Shipped production TypeScript/React to **3B+ users** at **95% test coverage** – event-driven architecture with observer-pattern state management and **reusable components**; **68% feature delivery acceleration** across 25K+ lines of Chromium
- Designed **C++ IPC transport layer** with **Protocol Buffers** – explicit schema evolution tradeoffs documented; **sub-50ms p99**, shipped to Chrome stable branch reviewed by senior engineers
- Identified p99 bottleneck at 1,200ms; implemented **lock-free concurrent search** eliminating contention – **96% latency reduction**, zero regressions; delivered design documents and participated in code reviews

Develop for Good | Software Engineer Intern

May 2024 – Aug 2024

- Designed stateless **AWS BaaS** – JWT auth for horizontal scalability; auto-scaling supporting **500+ concurrent users**, **90% deployment time reduction** via CI/CD (GitHub Actions)
- Diagnosed N+1 query bottleneck degrading response to 3s+; redesigned with **PostgreSQL composite indexing** achieving **sub-100ms** for 10,000+ records

PROJECTS

Pulumi – Contributor | Go, TypeScript, Infrastructure-as-Code

github.com/pulumi

- Submitted **Go CLI features** for multi-cloud (AWS/Azure/GCP) provisioning – open-source developer tooling under active review by core maintainers
- Analyzed **Raft/Paxos consensus** in distributed state synchronization – studied linearizability and correctness under concurrent operations and partial failures

SKILLS

Backend & Systems: gRPC, Protocol Buffers, Exactly-once semantics, Circuit breakers, Multi-AZ, Event-driven architecture, Fault tolerance

Languages: Python, TypeScript, Go, C++, Java, JavaScript, SQL, Bash, Rust

Frameworks & Databases: FastAPI, Django, Node.js, React, REST APIs, PostgreSQL, Redis, MongoDB

Cloud & DevOps: AWS (ECS Fargate, EKS, S3, RDS), Terraform, Docker, CI/CD (GitHub Actions), CloudWatch, Prometheus, Grafana, GCP

ML & Data: vLLM, LangChain, LLM APIs (Claude, GPT), LLM-as-a-judge evaluation, Data pipelines (batch + real-time)

AI Dev Tools: Claude Code, GitHub Copilot, Codex, Cursor
